

← Northstar

## Privacy Policy

**Last updated: 2026-05-07**

### 1. About this app

Northstar is a single-user personal finance tracker. The owner and developer (Connor Underwood) is the sole user of this application. There is no public sign-up, no marketing, and no third-party access to user data.

### 2. Data we collect

**Authentication data** (managed by Clerk): email address and authentication metadata.

**Financial data via Plaid:** account balances, transactions, holdings, and liability details for accounts the user explicitly connects through Plaid Link. The user (myself) provides explicit consent during the Plaid Link flow.

**Manually entered data:** account names, balances, interest rates, transactions, and goals entered through the app UI.

### 3. How data is stored

All data is stored in a private Postgres database (Neon) with at-rest encryption.

Plaid access tokens are additionally encrypted with AES-256-GCM before being written to the database.

All traffic between the browser, the app, and Plaid is TLS-encrypted.

### 4. How data is used

Data is used solely to render the user's own dashboard, compute net worth, categorize transactions, and track progress against stated personal goals. No data is sold, shared, monetized, or used for any analytics service.

### 5. Third parties

The app uses these service providers, each with their own privacy policy:

Plaid — for bank/investment data aggregation

Clerk — for authentication

Neon — for database hosting

Vercel — for application hosting

### 6. Data retention & deletion

Data persists as long as the application is in use. The user can delete any account, transaction, goal, or Plaid item at any time through the application UI or direct database access. Disconnecting a Plaid item removes its access token and stops further syncing.
